DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on May 27, 2003 has been entered.
2. The amendment filed May 27, 2003 has been entered.

Drawings

3. The proposed drawing correction and/or the proposed substitute sheets of drawings, filed on May 27, 2003 have been **approved**. Additionally, as stated in the previous Office action (paper no. 8), the corresponding corrected drawings have been received and placed in the filewrapper.

Claim Objections

4. The numbering of claims is not in accordance with 37 CFR 1.126 which requires the original numbering of the claims to be preserved throughout the prosecution. When claims are canceled, the remaining claims must not be renumbered. When new claims are presented, they

Art Unit: 3724

must be numbered consecutively beginning with the number next following the highest numbered claims previously presented (whether entered or not).

Misnumbered claims 11 and 12 have been renumbered 16 and 17, respectively.

Double Patenting

5. Applicant is advised that should claim 10 be found allowable, claim 16 will be objected to under 37 CFR 1.75 as being a substantial duplicate thereof. When two claims in an application are duplicates or else are so close in content that they both cover the same thing, despite a slight difference in wording, it is proper after allowing one claim to object to the other as being a substantial duplicate of the allowed claim. See MPEP § 706.03(k).

Claim Rejections - 35 USC § 112

6. Claim 17 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 17, line 1, the recitation “apparatus for punching holes” renders the claim vague and indefinite since sufficient structure has not been set forth to perform the recited function; in line 6, “said at least one solenoid valve” lacks antecedent basis; in lines 7-8 and 8, each occurrence of the recitation “at least one solenoid valve” is vague and indefinite as to whether it refers to that previously set forth or to another such solenoid valve.

Claim Rejections - 35 USC § 103

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. Claims 9, 10, 16 and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shimizu et al., pn 5,437,828 in view of Goldman, pn 3,299,761

Shimizu discloses an apparatus with almost every structural limitation of the claimed invention but lacks a compressed air source connected to the solenoid valve. However, the Examiner takes Official notice that it is old and well known in the art to provide a compressed air source for a solenoid valve for various well known benefits including facilitating the operation of the solenoid. Therefore, it would have been obvious to one having ordinary skill in the art to provide a compressed air source connected to the solenoid valve of Shimizu for the well known benefits including that described above.

Additionally, Shimizu lacks the punch assembly containing a steel ball. However, the Examiner takes Official notice that such punch structures are old and well known in the art and provide various well known benefits including providing a punch structure that is relatively inexpensive to manufacture and is capable of giving long trouble-free service. One example of such a punch structure is disclosed by Goldman. Therefore, it would have been obvious to one

Art Unit: 3724

having ordinary skill in the art to provide a punch assembly containing a steel ball on the apparatus of Shimizu for the well known benefits including those described above.

Response to Arguments

9. Applicant's arguments filed May 27, 2003 have been fully considered but they are not persuasive.

10. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Clark Dexter whose telephone number is (703) 308-1404.
